

Advanced Statistical Software

Moritz Dresch

July 2024

Motivation:

My motivation to create this R package came from the fact that I am very interested in web scraping. Since R is designed to work with data, I came up with the idea to work with real time social media data from the platform instagram to e.g. compare the numbers of followers of users. I hope that the package finds a use and reflects my motivation as well as my passion.
